Education

Ontario Tech University *2022 – Expected June 2027*
Bachelor of Computer Science; Digital Media Specialization (Minor in Sustainability Studies)
Undergraduate Thesis: *Sustainable Game Development Workflows: Investigating Asset Management, Rework, and Version Control in Indie Game Development*
Focused Coursework: Advanced Data Structures, Software Architecture, SQA & Testing, AI & Machine Learning, Computer Vision, HCI.

Technical Skills

Languages: C++, Python, Dart, Java, C#, JavaScript (ES6+), PHP, SQL, HTML5, CSS3, C
Frameworks & APIs: FastAPI, Flutter (Riverpod), React, Next.js, Node.js, REST APIs, Microservices
Databases & AI: YOLOv8, Supabase, Firebase, PostgreSQL, SQLite, sqflite, Relational Schema Design
Tools & Practices: Visual Studio, Git, Docker, CI/CD, Linux, Agile (Jira), Unit Testing, Cursor AI, Figma, Shaders (GLSL)

Featured Projects

FlipEngine (2.5D Custom Game Engine) *C++, OpenGL, GLSL, Visual Studio* *2026*
- Architected a 2.5D game engine from scratch in Visual Studio, handling manual memory management, sprite batching, and orthographic/perspective camera pipelines.
- Integrated GLSL shader passes for dynamic lighting and pseudo-depth sorting across 2D sprite planes in a 3D environment.

Rootstrike Infrastructure Node (Embedded C++ Thermal Systems) *C++, Nucleo-F446RE, STM32, UART* *2026*
- Engineered air-cooled compute node firmware in C++ keeping junction temperatures below $65°C$ with a Moving Average Filter to cut signal noise by 35%.
- Built high-frequency UART telemetry protocols broadcasting real-time system metrics and fan duty cycles every 100ms.

GlycoLens (Nutritional Intelligence & Medical Bolus Estimator) *Python, FastAPI, YOLOv8, REST APIs* *2026*
- Developed an AI clinical estimator processing meal photos via a FastAPI backend and YOLOv8 vision models with 88% bounding-box accuracy.
- Mapped vision labels against FatSecret REST APIs for sub-second carbohydrate and nutritional data retrieval.

Fish Boids Simulation (3D Autonomous Flocking Engine) *C++, OpenGL, GLSL Shaders* *2026*
- Implemented Reynolds' flocking algorithm (separation, alignment, cohesion) to simulate autonomous 3D fish schooling behaviors in C++.
- Reduced distance-checking overhead from $O(n^2)$ to $O(n \log n)$ via a custom 3D spatial partitioning grid, increasing frame rates from 22 to 60+ FPS across 10,000+ dynamic agent meshes.

Ontario Tech Plus (Full-Stack Student Mobile App) *Flutter, Riverpod, Dart, Supabase* *2026*
- Built global UI architecture using Riverpod state management, Supabase data streaming, and OpenDyslexic accessibility configurations.

Travel Diary Mobile App (UI/UX & Local Storage Integration) *Flutter, Firebase, sqflite, Figma* *2024*
- Designed high-fidelity mobile wireframes in Figma and built responsive UI layouts in Flutter for trip logging and photo entries.
- Configured sqflite relational databases to support local data persistence, offline caching, and asynchronous sync ops with Firebase.

Work Experience

Programmer *Ontario Tech University Robomaster "Ridgebots"* *2024 – 2025*
- Programmed low-level chassis motion and motor control systems for precise real-time robot maneuvering.
- Assisted in developing computer vision targeting models and autonomous sentry logic alongside cross-functional subteams.

Digital Consultant & Web Developer *Love Happy Live Well* *2026*
- Deployed an optimized production web platform achieving a 98/100 Lighthouse performance score and 45% faster load times.

Business Strategy & Market Analyst *Art Circle of Alberta / Vienna Waits* *2026*
- Analyzed user interaction funnels across 5,000+ data logs, identifying key drop-off bottlenecks and boosting conversion by 18%.

Subway Facility Maintenance (Summer Student) *Toronto Transit Commission (TTC)* *2026*
- Maintained transit station facility standards across high-volume subway hubs, adhering strictly to safety regulations and hazard protocols.

Customer Care Associate *Pedalheads* *Apr 2023 – Aug 2024*
- Cultivated relationships with clients, boosting retention through targeted engagement and service excellence.
- Identified upsell opportunities to drive sales revenue while tailoring offerings to meet specific customer goals.

Achievements & Initiatives

- **Ubisoft NEXT 2024:** Participated in the technical art discipline, making tools and shaders.
- **ENACTUS x WiT Case Competition (3rd Place):** Designed and pitched a software solution under a strict 24-hour deadline.
- **Technovation:** Collaborated in a distributed team environment to develop an educational accessibility mobile app.
